Dear ArmorAuto,

Over two years ago we applied ArmorCoat™ to a pair of new 2006 Freightliner trucks. The road conditions that these trucks encounter are incredibly harsh. We have been amazed at the degree in which the paint finish has held up on the ArmorCoated trucks verses the trucks that did not have this protective coating. As the mileage climbs past a quarter million on these two trucks, they continue to look almost new, which we feel is a true testament to the durability of ArmorCoat.

When I compare paint on the other trucks of the same age and mileage, there is quite a difference in how well the original paint has held up. This product is very durable and has helped make the original paint last much longer. I would recommend this product to the fleet industry and there is no doubt that we will be ArmorCoating our new trucks as they are put into operation.

Thank you,

Dana Baird
